

Polypodium glycyrrhiza

Licorice fern

Polypodiaceae

Exposure Shade

Water Regular water

Form Evergreen fern

Height 1 foot

Flower color

Bloom time

Licorice fern spreads by rhizomes to form loose colonies of firm deep green fronds. In nature it often grows on logs or rocks. Suitable for a woodland rock garden or a container, where the fronds will be denser and more upright. Needs good drainage.

Habitat Near coast on rocks, logs
